SINTREX

GRAPHICAL NETWORKS
Get visual about IT.

Struggling to manage your growing data center's space and resources?
Take control with Sintrex Drawing Service & netTerrain

Fed up with unnecessary IT spending?

Control your inventory and eliminate redundant IT equipment and power expenses:

- View, and report on, asset and data center capacity with dashboard reports

- Maximize rack space with visualization and reporting

- Identify low-utilization servers and reuse or decommission them

Fielding skyrocketing power costs but limited by a lack of info?

Reduce energy expenditures up to 30%:

- Analyze server efficiency, power consumption, and data center thermal conditions with real-time rack views of power availability

- Lower costs by identifying excessive power consumption and ghost servers that draw power but don't perform tasks

Headaches from outdated diagrams and spreadsheets?

Automatically keep your data center information and diagrams up-to-date:

- Access diagrams from any web-based browser with views of rack space, power, and weight availability in a central repository

- Network information stays up-to-date with discovery, work order tasks, connectors, and team collaboration

Spending too much time and money on cabling?

Seamlessly track cable and circuit changes:

- Easily reserve ports, and locate available ones

- Visualize and document your cables: copper, fiber (and strands), cable trays, power cables, run traceroutes to view cable paths, and much more

- Understand and plan for capacity with reports that show use and available ports per rack

✓ **Easy-to-Use**
We make IT visualization easy with software that's as usable as it is powerful.

Wraparound Support
Comprehensive support: connect with experts, not robots..

Flexible
Create your own diagrams with no need for consultants.

Scalable
Flexible licensing (cloud and on-premise) that doesn't break the bank.

Web-based
100% web-based and accessible from any browser, with Cloud options.
