

SCAN, SECURE, REPEAT

According to SANS 83% of security professionals are concerned about security gaps in between vulnerability scans, however, fewer than 40% of organisations worldwide scan their systems at least weekly.

Software updates and patch management cycles forms the base of a sound security practice.

Deploying automated software update tools, in order to ensure that operating systems and 3rd party software is running the most recent security updates provided by the software vendor, is a great start but nearly always leaves many applications unchecked and vulnerable.

Businesses that do not routinely scan for vulnerabilities and proactively address discovered flaws face a significant likelihood of having their computer systems or customer offered services compromised.

ADVANTAGES OF ONGOING VULNERABILITY MANAGEMENT

Improved Security & Control

Visibility & Reporting

Operational Efficiency

Repeatable Results With Incremental Improvements

ROI & Data Protection Upkeep

We can provide custom vulnerability assessment options to help you manage and mitigate your risk!
